

Frontend Requirements:

- **Notifications:** Users receive alerts for order updates, promotions, and reviews.
- **Review System:** Users can leave and view product reviews with ratings.
- **User Interface:** Clean, simple, and easy-to-navigate layout for a seamless experience.
- **Responsive Design:** Optimized for both mobile and desktop users.
- **Essential Pages:**
 - **Home:** Featuring products and promotions.
 - **Product Listing:** Categories, filters, and sorting options.
 - **Product Details:** Detailed info, images, and pricing.
 - **Cart:** Easy view and modification of items.
 - **Checkout:** Simple, secure checkout process.
 - **Order Confirmation:** Summary and thank-you message post-purchase.

Sanity CMS as Backend:

- Leverage Sanity CMS to manage all product information, customer profiles, and order data.
- Design custom schemas in Sanity to align with business objectives from Day 1, ensuring flexibility and scalability.

Third-Party APIs:

- Integrate essential third-party APIs for services like shipment tracking, payment gateways, and other backend functionalities.
- Ensure that APIs provide the required data in real-time to enhance frontend performance and user experience.
